

AZURE SERVICE

INTRODUCTION

Starting from September 2015, we are providing additional support to our Clients which are using Web Applications, regarding the usage of Microsoft Cloud Storage - Azure.

Azure Storage provides scalable, secure, performance-efficient storage services in the cloud.

Following text will provide additional information, to help making your decision easier according to your Business needs, where we can Offer following:

1. AZURE REGISTRATION & STARTUP CONFIGURATION

We provide complete Registration process support. There are two possibilities, to register Azure account on your Company Name, or registering as Idea Software. Time saving is the most important difference where Idea Software do not need support from your employee when registering. We have complete control and we take full responsibility for the Azure Maintenance.

Our main target is precise planning of capacity/processors/licensing according to your needs, whether you decide to "Go On Your Own" or you choose the other option.

Final result is Up and Running Web Application with Best Performance and Optimized monthly Costs.

2. "PAY AS YOU GO"

We consider our new service as additional support to our important Clients, where we don't charge any additional costs to the real Azure Monthly Costs which means, you are only paying for what you are using. Additional costs are monthly support costs, as well as first installation & registration for which our programmers need to spend time.

Windows Azure pricing will be based on consumption, with a per-hour fee that's dependent on the size of the instance for Azure computing services and per-month or per-transaction fees for Azure storage services based on data size.

With this approach, our target is to give you exact data for analyzing your service usage each month. For additional support costs explanation, please check the COST part.

3. SCALE UP & OPTIMIZE / MONTHLY SUPPORT

As your base grows and the application needs to scale up to meet those growing demands, with Azure we will take care of adding additional capacity and select the appropriate number of processors to make sure your application is running smoothly. You don't ever have to worry about running out of server capacity. Our main target is setting up the optimal solution.

4. BACKUP

You will get high availability and reliability with redundant copies of your data and automatic failover. No need to backup data by yourself!

COSTS

Nr.	Description	Notes
1.	Azure Registration & Startup Configuration	One time cost (per Azure Account creation) If registered as Idea Software + one year maintenance agreement, this cost is not charged.
2.	"Pay As You Go"	Supplied as monthly real usage costs (as excel statistic file of service usage costs)
3.	Backup	Monthly support
4.	Scale Up & Optimize	Included in Monthly support
